

Enclosure with battery compartment,
Kemo G01B approx. 101x60x26mm

Create a speaker hole pattern approximately here, be sure the speaker is slightly larger than the holes.

The display windows is milled out in two depths so it can not fall thru the hole, Mill out a window out of thin red acrylic.

Also mill out the switch and potentiometer holes in the top part. The switch is definitely to high, taking out only 0.5mm will be enough.
